

Australian BioResources Eco-friendly, Solar, Ultra-Clean Mouse Facility

THE AUSTRALIAN BIORESOURCES MEDICAL RESEARCH SUPPORT CENTER at Moss Vale is a revolutionary centralized animal breeding facility housing and supplying highly specialized mice to multiple research facilities.

This state-of-the-art facility is the first of its kind in Australia, and has the capacity to house 40,000 mice with over 400 genetic types in Ultra-Clean bioBUBBLE® Cleanroom Environments.

Each positive pressure bioBUBBLE Clean Room contains 1600 mouse cages with individual air filtration, controlled lighting, and reduced noise levels to reduce stress.

The building was specifically designed to reflect modern principles of environmental sustainability, animal ethics, and occupational health and safety. With an emphasis on self-sufficiency, this facility utilizes solar power, rainwater, and low-energy lighting for daily operations.
